

Telephone safety.

Do your telephones meet North
American safety standards?

Safety standards.

- For U.S and Canadian market entry, all terminal equipment must meet national product electrical safety requirements.
- **Warning:** Not all telephones sold for installation in hotel guestrooms meet these standards.
- If the telephones you have purchased do not meet electrical standard, your property could be at risk for electrical fires and guest insurance claims.

Safety certification.

- Intertek is a global leader in the testing, inspection, and certification of electrical products.
- Intertek tests to applicable ANSI, UL, and CSA standards.
- In the U.S., Intertek is an OSHA-recognized national testing laboratory (NRTL).
- In Canada, Intertek is recognized as a Testing Organization (TO) and a Certification Body (CB).

ETL mark.

- A product bearing the ETL Listed Mark (CUS) has been tested by Intertek and meets the minimum requirements of U.S. or Canadian electrical safety standards.
- A product bearing an ETL Listed Mark reflects a manufacturer's dedication to the safety and quality of their products.

ETL mark.

- For additional information on telephone safety certification and ETL Listed products, visit:
- <http://www.intertek.com/telecom/electrical-safety-testing/>

Compliance.

- Help insure the safety of your hotel guests, and protect your property by checking the backs of your telephones for the ETL Listed label.
- Again, if the telephones you have purchased do not carry the ETL Listed Mark, your property could be at risk for electrical fires and guest insurance claims.

Scitec telephones.

- All Scitec telephones carry the ETL Listed Mark and are certified to meet applicable ANSI, UL, CSA, and related telephone safety standards.

ETL listed products.
