### **Scitec Introduces New Aegis-08 Series Guestroom Telephones.**

Scitec, Inc., a leading global ISO-9001 and RoHS-certified manufacturer of telephones, and certified Minority Business Enterprise (MBE), has introduced 12 new Aegis-08 telephones designed to electronically automate line selection, guest voicemail retrieval, and message waiting light functionality.

"Aegis-08 telephones set the standard for economy branded hotels," states Jose Quiros, Scitec/TeleMatrix Vice President Sales & Marketing. "These phones offer improved styling and more features like SciTouch® One-Touch message retrieval lightbar at the same low price.

Patented Scitec one-touch voice mail retrieval technology is available on single and two-line Aegis-08 speakerphone models. The red message lightbar, located at the front base of the phone, serves as both a message waiting light and programmable speed dial key. To access voice mail messages, the guest simply touches the blinking red lightbar to automatically dial for messages and turn on the phone speaker. The guest may then choose to listen to messages over the speakerphone or switch back to handset by lifting the receiver for greater privacy. This is an important technology breakthrough, particularly for the hotel guest who is generally unfamiliar with guestroom telephones, or for the visually impaired guest.

Aegis-08 telephones are all line-powered, requiring no need for an external power plug. Two-line models are designed to automatically select the open line for hotel guests for either voice or data. For outgoing voice calls, the guest simply picks up the receiver and dials. When the telephone rings, the guest can answer the ringing line simply by lifting the receiver. It isn't necessary to push either the "Line 1" or "Line 2" button to answer the call. This makes the telephone set very easy to use, even by a person who is unfamiliar with 2-line telephone sets. With a laptop plugged into the telephone data jack, incoming calls are automatically directed to Line 1, even if the guest is working online.

Smart Aegis-08 telephones automatically configure the message lightbar to operate in either LED or NEON message waiting signal mode. For the hotel owner this simplifies ordering telephones to match PBX capabilities. It also eliminates the delays and costs associated with phone-by-phone manual conversion of message waiting light electronics prior to shipment.

For additional information on Aegis-08 telephones, visit the Scitec website at [www.scitecinc.com](http://www.scitecinc.com), call 800-451-4035 (+1-217-384-6041), or write [marketing@scitecinc.com](mailto:marketing@scitecinc.com).

### **About Scitec**

Scitec and TeleMatrix merged on April 17th, 2006, consolidating four popular telephone brands, including the Marquis® Series (hospitality), Aegis® Series (hospitality), Spectrum PLUS® (business) and Regency® (residential). The merged company customer base exceeds 6 million units installed at over 25,000 commercial customer locations worldwide. Call +1-217-384-6041 or visit [www.scitecinc.com](http://www.scitecinc.com) for details.
